I am a Robotic Intelligence student currently in my third year with an average grade of nearly 9. I have earned several honors and an honorable mention in my bachelor's degree. I am motivated to continue learning and delve deeper into my studies and the world around me.

PROFESSIONAL EXPERIENCE

*Currently, I have no professional experience working for others, as I am focused on my academic and self-directed learning. In parallel, I co-founded **Gallinet**, an applied robotics entrepreneurial project in which I actively participate in technical development and website creation. This project has been recognized with the **UJI Entrepreneurial Talent Award (4th Edition)**. I strive to acquire solid knowledge both inside and outside the classroom to be prepared when the time comes to enter the workforce.*

*Furthermore, I am part of the **UJI Robotics Team**, where I participate in the **autonomous catamaran** project, working in a collaborative environment focused on the development of real robotic systems.*

*I was also selected for the **ARME Awards** thanks to my **Portabot** project, a personal robotics development that allowed me to practically apply the knowledge acquired during my studies.*

EDUCATION

UNIVERSITAT JAUME I

Castellón, Spain

Robotic Intelligence

Honors: Robot Programming, Physics, Operating Systems, AI, among others.

ADDITIONAL SKILLS

- I understand technologies such as ROS2, Android Studio, Bash, C++, Java, and Python.
- I am a native Spanish and Valencian speaker. I have a C1 level in English and an intermediate level in Mandarin Chinese.
